10 Reasons Why You Should Choose Atlas Agaricus Bio® products

1. **Experienced:** Since 1995, Atlas World Group is the leading global manufacture and distributor dedicated to this wellness mushroom – and is the only one whose product was studied and used by NIH-sponsored researchers, which found Atlas Agaricus blazei to be effective in healthy and safe immune system modulation, and minimizing growth of damaged cells.
2. **Made in the USA:** Our mushroom grower in the USA has 50+ history of developing and providing cultures to the commercial mushroom industry. Our raw materials for Agaricus Bio® are harvested in the USA.
3. **Unique Hybrid Strain:** have been used to developed and select hybrid strains of Agaricus blazei for the exclusive use of Atlas World group and it's customers. These strains combine attributes from both the wild mushroom found in Brazil and the Japanese cultivated strain. Our strains are proprietary, and are not available elsewhere.
4. **Beta-Glucans Test:** Each production batch is tested for both the soluble and water insoluble fractions of beta blucans, the molecules shown to be active against a wide range of tumor (cancer) cells.
5. **DNA Fingerprinting Test:** Our Agaricus blazei mushroom is tested for a unique set of DNA fingerprinting as a part of quality assurance program.
6. **Certified Organic:** Our Agaricus blazei mushroom is certified by both USDA and JAS (Japan Agricultural Standards) Organic certification programs.
7. **Quality Production:** Our production technology uses raw materials that are specifically selected for use in its proprietary mushroom process. All raw materials including water are subjected to a variety of quality assurance tests prior to use to insure the highest quality product. The process is carefully monitored daily and subjected to the US HACCP system (Hazard Analysis Critical Control Points).
8. **Superior Nutraceutical Value:** Each mushroom is harvested by hand and is processed and dried within a few hours of harvest to insure the most complete preservation of its nutraceutical value.
9. **Global Standard:** Samples are taken daily to insure that the product exceeds standards set for global customers including major pharmaceutical and cosmetic companies.
10. **Potency:** In order to insure the efficacy of Atlas Agaricus blazei products, our R&D team has developed a bioassay to determine the potential for these products to simulate anti-cancer activity. Our R&D team measures the production of Tumor Necrosis Factor to insure the potency of Atlas Agaricus blazei mushroom.
