

Nature's Answer Quality Control Statement

Nature's Answer® owns and operates one of North America's most extensive pharmaceutically licensed herbal manufacturing & quality control facilities. We are registered and are in compliance with all herbal regulatory agencies. This voluntary compliance requires adherence to Current Good Manufacturing Procedures as set forth and monitored by Federal and State Food, Drug and Health Authorities.

Our packaging facility includes four class 1000 clean rooms for liquid filling of botanicals, vitamins and nutritional supplements in order to maintain the highest level of quality and purity of our products and reduce the possibility of micro bacteria and cross contamination.

Quality Control is at the heart of the philosophy at Nature's Answer. Each and every product is subjected to a number of rigorous quality control tests everyday. Products that we manufacture must match specifications such as refraction, melting point, pH, specific gravity, density and water levels.

Nature's Answer incorporates highly sophisticated and analytical equipment such as High Performance Liquid Chromatography (HPLC), Infrared Spectrometer (IR), Ultra Violet Spectrometer (UV), Gas Chromatography and Total Organic Carbon Analyzer (TOC).

TOC allows us to check our water for any contamination, chemical or micro biological down to parts per billion. This ensures that the water we use in production is pure and free of any undesirable contaminants. TOC is the only FDA recognized method for United States Pharmacopeia (USP) Grade water testing.

Finally, the QC Department has a fully equipped Microbiological-testing laboratory, which follows the appropriate testing methods as defined by the U.S. Pharmacopeia (USP). The microbiological laboratory is used to fully test all botanical extracts for any micro-activity. This guarantees a botanical extract free of any unwanted and potentially unhealthy microorganisms.

Nature's Answer® is a family-owned and operated company dedicated to total health. As one of America's largest and oldest manufacturers of maximum strength liquid herbal extracts (since 1972) and pioneers of alcohol-free extracts, we continue to combine the best of traditional herbal remedies, vitamins and minerals with our knowledge of innovative scientific techniques and phytopharmaceutical manufacturing, to deliver high-quality, naturally-derived products for the entire family.
