

## **Quality Statement June 13, 2007**

To Whom It May Concern:

**Coromega** is manufactured in a FDA and NSF registered facility in Vista, California, using Good Manufacturing Practices standards.

All activities from the receipt of raw materials to the shipment of finished products are covered by a full set of Standard Operating Procedures. All raw materials are tested when received and our suppliers are required to provide

Certificate of Analysis. We use the highest quality ingredients. As an example, we use only molecularly distilled fish oil. This process guarantees the removal of impurities, such as mercury and PCBs. During manufacturing and pouching, Coromega is kept protected from oxygen, the enemy of fish oil. Pouches are formed under nitrogen atmosphere. For traceability purposes, we keep manufacturing batch records of our products and all documentation relative to the sampling and the testing of raw materials, in-process products, and finished products.

Every batch of Coromega is tested for quality and potency to ensure that only products meeting the highest quality standards are shipped to our customers.

We are confident that Coromega is the highest quality and most stable omega-3 fish oil product on the market. That, along with the superior bioavailability and good taste gives consumers the easiest way to get omega-3 fatty acids.

Sincerely,

Celine Lacote  
Director of Quality Assurance and Regulatory Affairs  
The Coromega Company
